APPLICATION

Artheo-Ease Sachet ingredient studies concluded that an influence of the three major components supplemented by the other elements as a dietary supplement could help to prevent cartilage degeneration. More over the general well-being of the bodies joints could be enhanced by these components thus could have a inhibiting effect on osteoarthritis and the maintenance of body joints, which ingredients are:

- Glucosamine Sulphate - an amino sugar and a prominent precursor in the biochemical synthesis of glycosylated proteins and lipids. It was suggested that glucosamine can help prevent the destruction of cartilage that is the hallmark of osteoarthritis.
- MSM (Methylsulfonylmethane) - MSM is an organosulfur compound also known as methyl sulfone and dimethyl sulfone.
- Chondroitin Sulphate - Chondroitin sulphate is an important structural component of cartilage and provides much of its resistance to compression. Along with glucosamine, chondroitin sulphate has become a widely used dietary supplement for treatment of osteoarthritis.

Artheo-Ease's calcium and magnesium content is a natural proven bioavailable substance. These two essentials minerals are involved in enzyme reactions, nerve functioning, muscle relaxing and maintaining healthy blood vessels.
