APPLICATION

Hypertension's ingredient studies outcome suggested the following:

- Epidemiologically, multiple studies have identified an inverse relationship between dietary magnesium intake and BP.
- Potassium is crucial to heart function and plays a key role in skeletal and smooth muscle contraction, making it important for heart muscular function.
- Pub-Med review of all published trials of Coenzyme Q10 studies for hypertension, assess overall efficacy - lower systolic blood pressure by up to 17 mm Hg and diastolic blood pressure by up to 10 mm Hg without significant side effects.
- Valerian promotes higher levels of gamma-amino butyric acid (GABA) in the body. GABA helps regulate blood pressure.
- Study of Policosanol it was concluded that Policosanol administered long term is effective in lowering LDL-C, total Cholesterol and increasing HDL-C levels in patients with hypertension.
- The Vitamins E, B1, B2, B3, B5, B6, and B12 have been used in combination with the various ingredients in heart health studies and general well-being studies.

Hypertension's calcium and magnesium content is a natural proven bioavailable substance. These two essentials minerals are involved in enzyme reactions, nerve functioning, muscle relaxing and maintaining healthy blood vessels.
